

NG YEUN LOON

Big Data Developer

Contact	Summary
+6012-7648595 yeuloonng22219@gmail.com h LinkedIn	Results-driven Big Data Developer with expertise in Oracle ADW, Hive, and ETL pipeline optimization. Proven track record in designing automated data validation frameworks and streamlining ingestion processes from diverse sources including Salesforce, APIs, and GFT. Committed to delivering scalable, high-quality data solutions while continuously expanding technical proficiency in Python and Cloud technologies.
Education	Work Experience
Sunway University Bachelor of Business Analytics (HONS) 2020 - 2023 HELP University Foundation in Science 2019 - 2020 SMK Sinar Bintang Sijil Pelajaran Malaysia (SPM) 2014 - 2018	Big Data Developer Experian Global Delivery Center Malaysia Oct 2023 - Present - Architect and optimize ETL pipelines using Oracle Data Integrator (ODI) for high-volume data ingestion into Oracle Autonomous Data Warehouse (ADW). - Design and execute advanced SQL queries to validate data integrity and enhance reporting efficiency. - Manage Hive tables on HDFS clusters to process large-scale datasets within the Hadoop ecosystem. - Automate complex data workflows using Linux Shell Scripting and Crontab. Operations Intern NEC Corporation of Malaysia Jan 2023 - Mar 2023 - Optimized procurement workflows by automating SAP Purchase Orders and Carrier Sales Order Submissions. - Conducted data-driven analysis to identify operational bottlenecks, resulting in a 30% reduction in process time. Ecommerce Intern / Part Time Assistant Watsons Malaysia Dec 2021 - Mar 2022 - Analyzed traffic data to optimize product pricing strategies on Shopee and Lazada platforms. - Managed daily performance reports using Excel, enhancing data visibility for decision-making during peak sales events.
Technical Skills	
Databases & Big Data: Oracle ADW, Hive/HDFS, Oracle SQL Developer, Hadoop. Languages: SQL, Python, Bash Shell Scripting. Tools & Platforms: Oracle Data Integrator (ODI), Oracle Cloud Infrastructure (OCI), Git, Linux, Crontab. Core Competencies: ETL/ELT, Data Warehousing, Data Quality Assurance, Agile/Scrum.	

Technical Project Highlights

Data Journey Monitoring Alert Framework (DJMAF)

- Developed Python scripts to automate row-count validation between source and target datasets.
- Engineered dynamic queries to manage complex joins and aggregations in curated tables.
- Integrated the framework with existing orchestration tools to proactively alert developers of issues, such as missing source files.

Impact: Successfully reduced end-user incident reports by 50%.

Direct Database Framework

- Engineered a Python-based framework to ingest data from external sources, including Salesforce and RDE.
- Automated the end-to-end data flow into Oracle ADW (Stage/Raw and Mart layers).

Global File Transfer (GFT) Framework

- Developed a Python ingestion solution for data transferred via STS (Secure Transfer Service).
- Managed seamless data loading from flat files into Oracle ADW architectures.
